

AN EVOLVING MISSION

For over 30 years, Tekmicro has been an industry leader in providing commercial item, high performance data and signal processing solutions for defense embedded systems. Leveraging a strong heritage in system engineering and signal processing, Tekmicro matured by collaborating with military and intelligence community customers to develop products that address high bandwidth, low latency mission requirements while reducing program cost and risk.

While these tenets remain true at Tekmicro's core, we are evolving our business to address the emerging needs of domestic and coalition partners. With ever increasing threats and the warfighter's unquenchable need for information to maintain technological advantage, Tekmicro's agile engineering business model brings together performance, open architecture, network connectivity and security in the form of affordable products and services to ensure customer mission success.
